ACKNOWLEDGEMENTS

This book evolved over 15 years starting when Princeton Satellite Systems was incorporated. It encompasses the collective experience of the authors in spacecraft attitude and orbit control. This started with work on the NASA Space Shuttle at the Charles Stark Draper Laboratory and continued with work on numerous spacecraft at RCA Astro Electronics (which became GE Astro Space and is now part of Lockheed Martin.) Most of the recent work discussed in this book relates to work done by Princeton Satellite Systems on numerous Air Force, NASA and commercial contracts.

The authors would like to thank their many colleagues with whom they have worked over the past 30 years who in some way influenced the work in this book. This includes collaborators on projects and managers of projects on which Princeton Satellite Systems worked. This list is not necessarily complete and we apologize to anyone we have overlooked!

We would like to thank Professor Manuel Martinez-Sanchez, who was Mr. Paluszek's and Ms. Thomas' thesis advisor at MIT, Mr. Paul Zetocha, manager of numerous PSS contracts at AFRL, Dr. Barbara Sorensen of the U.S. Air Force, Björn Jakobsson of the Swedish Space Corporation with whom we have worked on the PRISMA project, Mr. Douglas Freesland who awarded us the Indostar attitude control system contract, Dr. Alfred Ng of the Canadian Space Agency, Mr. Douglas Bender of Boeing with whom we worked on TDRS, Mr. Rich Burns of NASA with whom we collaborated on TechSat-21, Dr. Russell Carpenter of NASA who managed one of our formation flying contracts, Dr. Neil Goodzeit of Lockheed Martin, Bruce Campbell, and Andy Heaton of NASA with whom we have worked on solar sails, Dr. Robert McKillip of Continuum Dynamics who collaborated with us on fault detection, and Mr. Christian Phillippe of ESTEC. Douglas Klein, a summer intern, helped edit the third volume. We would also like to thank former members of the company who are no longer at Princeton Satellite Systems: Dr. Pradeep Bhatta, Dr. James Frueh, Mr. Derek Surka, Ms. Kerri L. Kusza, Ms. Wendy Sullivan, Ms. Margarita Brito, and Mr. Mike Miller.

One of the ideals we strive for at Princeton Satellite Systems is a work environment that encourages a balanced lifestyle. We recognize that our success at work is only possible through the support of our families, and we are grateful to them.

Acknowledgements	iii
List of Examples	ix
1 Introduction	1
1.1 How to Use This Book	1
1.2 Spacecraft Control	2
1.3 Control System Terms	5
1.4 What A Spacecraft Control Engineer Needs To Know	6
1.5 Product Information	8
2 Design Tutorial	9
2.1 Introduction	9
2.2 Conceptual Design	10
2.3 Simplifying Assumptions	10
2.4 Link Analysis	11
2.5 Thermal and Optical Model	13
2.6 Spacecraft Orbit Control	15
2.7 Attitude Control System Design and Simulation	19
2.8 Power and Thermal Subsystem	21
2.9 Simulation	22
3 Control System Design Process	27
3.1 Design Issues	27
3.2 Design Process	29
4 Preliminary Designs	31
4.1 Introduction	31
4.2 Requirements Analysis	31
4.3 Satellite Design	33
5 Kinematics	41
5.1 Introduction	41
5.2 Euler Angles	42
5.3 Transformation Matrices	42
5.4 Quaternions	44
6 Attitude Dynamics	53
6.1 Inertia Matrix	53
6.2 Rigid Body	56
6.3 Gyrostat	59
6.4 Modeling Flexible Structures	60

6.5	A Simple Flexible Model	62
7	Orbits	67
7.1	Introduction	67
7.2	Representations of Orbits	67
7.3	Propagating Orbits	72
7.4	Gravitational Acceleration	73
7.5	Linearized Orbit Equations	76
7.6	Restricted Three Body Problem	77
8	Orbit Maneuvers	81
8.1	Introduction	81
8.2	Background	81
8.3	Impulsive Maneuvers	82
8.4	Low-Thrust Maneuvers	85
8.5	Close Maneuvers	85
8.6	Maneuvers with Constraints	88
9	Sensors	93
9.1	Introduction	93
9.2	Types of Sensors	93
9.3	Planet Optical Sensors	94
9.4	Gyros	99
9.5	Other Sensors	100
10	Actuators	101
10.1	Introduction	101
10.2	Types of Actuators	101
10.3	Reaction Wheel Model	102
10.4	Control Moment Gyro	105
10.5	Thrusters	108
10.6	Magnetic Torquers	111
10.7	Solenoids	112
10.8	Stepping Motor	117
11	Propulsion	119
11.1	Introduction	119
11.2	Physics of Propulsion	120
11.3	Nozzle Theory	122
11.4	Chemical	123
11.5	Low Power Electric	124
11.6	High Power Electric	125
11.7	Multiple-Stage Rockets	128
12	Disturbances	131
12.1	External Disturbances	131
12.2	Internal Disturbances	143
12.3	Fourier Series Representation	143
13	Budgets	145
13.1	Introduction	145

13.2	Pointing Budgets	145
13.3	Propellant Budgets	147
13.4	Mass Budgets	147
13.5	Power Budgets	149
14	Simulation	151
14.1	Introduction	151
14.2	Linear	151
14.3	Nonlinear	152
14.4	Differential Equations	152
14.5	Simulations for Control System Verification	156
14.6	Simulation of Stochastic Processes	157
15	Control Design	161
15.1	Introduction	161
15.2	Simple Control System	161
15.3	The General Control System	163
15.4	Fundamental Relationships	164
15.5	Tracking Errors	167
15.6	State Space Closed Loop Equations	168
15.7	Approaches to Robust Control	169
15.8	Single-Input Single-Output Control Design	174
15.9	Digital Control	178
15.10	Continuous to Discrete Transformations	184
15.11	Flexible Structure Control	188
15.12	Model Following Control	196
15.13	Double Integrator Control	198
15.14	Lyapunov Control	205
16	Spacecraft Attitude Control	209
16.1	Introduction	209
16.2	Attitude Control System	210
16.3	Propagation of Quaternions from Gyro Data	211
16.4	Gravity Gradient Control	212
16.5	Nutation Control	214
17	Attitude Estimation	217
17.1	Introduction to Estimation Theory	217
17.2	Gyro Model	219
17.3	Conversion from Continuous to Discrete Time	220
17.4	The Kalman Filter Algorithm	220
17.5	Unscented Kalman Filter	221
17.6	Batch Methods	224
17.7	Vector Measurements	226
17.8	Disturbance Estimation	227
17.9	Spin Axis Attitude Determination	228
17.10	Stellar Attitude Determination	235
17.11	Static Attitude Determination	235
17.12	Recursive Attitude Determination	236
18	Orbit Estimation	245

18.1	Recursive	245
18.2	Batch	251
18.3	Autonomous Navigation of Spacecraft	253
18.4	Measurements	258
19	Flight Operations	273
19.1	Introduction	273
19.2	Elements of Flight Operations	273
19.3	Mission Operations Timeline	273
19.4	Mission Operations Entities	273
19.5	Mission Operations Preparation	275
19.6	Mission Operations Organization	276
19.7	Mission Control Center	277
19.8	Mission Operations Example	278
20	Mission Planning	279
20.1	Introduction	279
20.2	Orbit Design	279
20.3	Launch Opportunities	283
20.4	Observation Time Windows	285
20.5	Ground Coverage for Sensors	289
20.6	Attitude Profile Design	291
A	Math	301
A.1	Vectors and Matrices	301
A.2	Spherical Geometry	304
A.3	Calculus	305
A.4	Laplace Transforms	306
B	Time	309
B.1	Introduction	309
B.2	Time Scales	309
C	Coordinate Systems	313
C.1	Introduction	313
C.2	Selenographic Coordinates	314
C.3	Areocentric Coordinates	315
C.4	Heliocentric Coordinates	316
	Bibliography	317
	Index	322
